# Your organisation deserves something better, faster, secure and more resilient.

If your organisation needs the internet to support business critical data and applications, it's important to find a connection that works for you. Serviceteam IT aim to understand your organisation and consider a range of solutions that deliver proven results.

## KEY FEATURES & BENEFITS

Serviceteam IT have enterprise solutions for organisations of any size. We offer scalability and flexibility that would otherwise be unavailable from legacy services, and deliver dedicated, secure, uncontended fibre connections for all your voice and data traffic.

### SAVE TIME & MONEY

Make your network work for you. An improved connection provides an excellent return on investment - gain access to a range of cost-saving services and enjoy internet and network access up to 99.999% of the time.

### IMPROVE PRODUCTIVITY

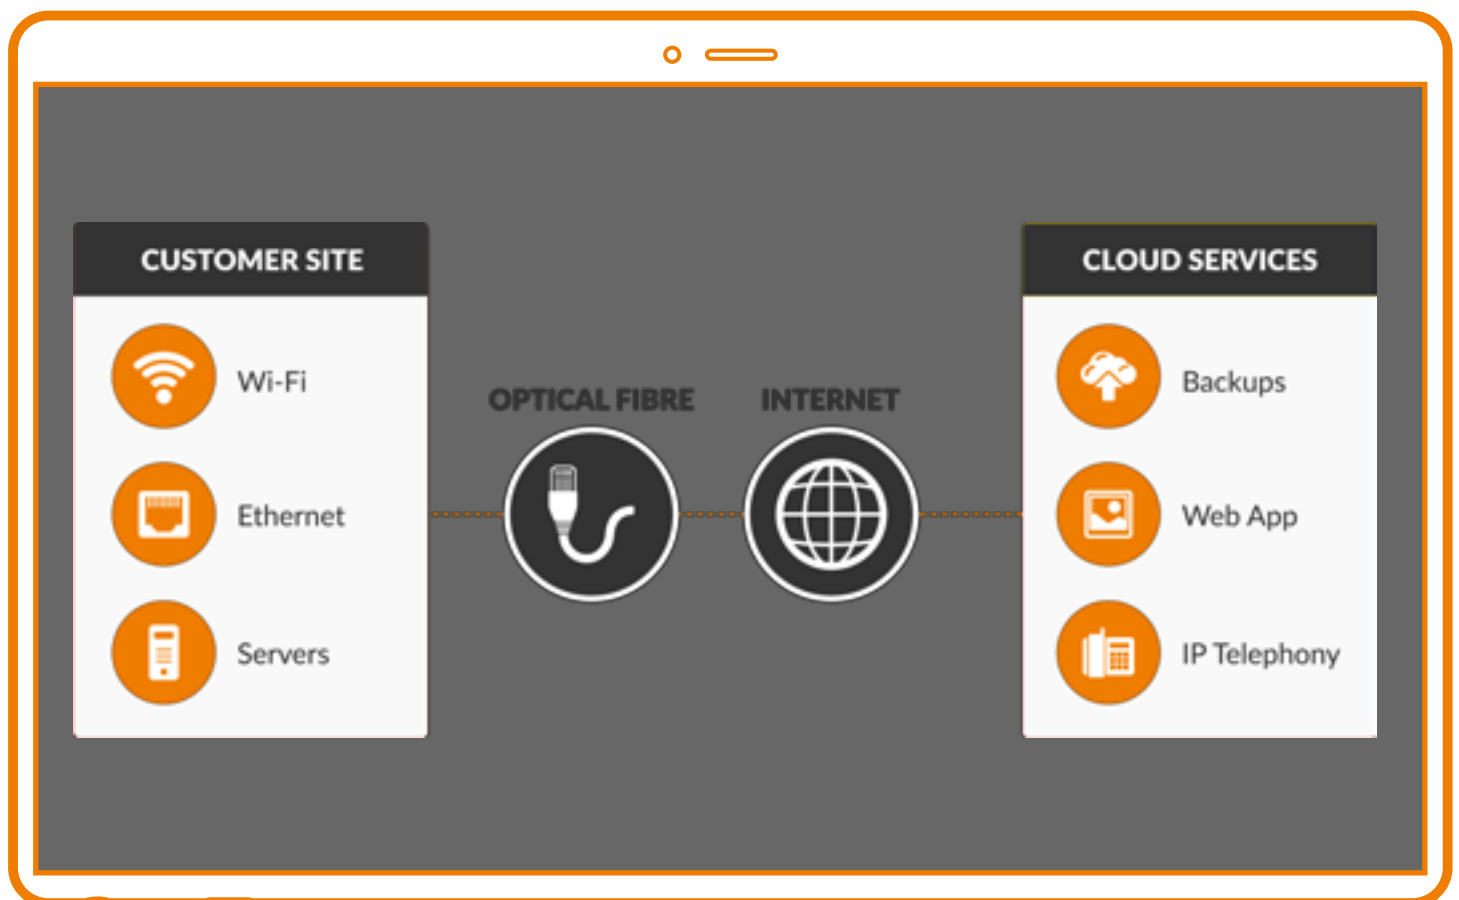

Work smarter, not harder, and use cloud based software and collaboration services to improve the way people work, and link them more effectively to sites or customer located in other sites or across the globe.

### SECURITY & CONTINUITY

Enjoy peace of mind with secure private virtual cloud. Mitigate both cost challenges and migration risks with flexibility and ensure business-critical functions stay online around the clock with high availability backed by SLAs.

# Making sense of the nuts and bolts.

A Fibre Ethernet leased line is now the standard upgrade from broadband. You benefit from unshared, uncontended access to the internet, with guaranteed upload and download speeds.

## INFRASTRUCTURE DESIGN & DELIVERY

Fibre internet is an ideal choice for businesses that need extra capacity for their premises, for supporting internal users of services such as IP Telephony, cloud services, or external access to servers.

Fibre ethernet circuits are now the standard upgrade for existing broadband technology and can provide you with a dedicated Internet or Point-to-Point connection meaning that the line is used exclusively by your traffic.

Unlike broadband, this means you are guaranteed upload and download speeds and your connection is not affected by network congestion caused by other users or during peak-times.

As a hybrid connectivity provider, Serviceteam IT partners with all the major network carriers to provide you with a range of options that are best suited to your business. Working with your organisation, we develop a clear picture of risks and dependencies.

We get to know how your systems and users work and communicate and apply our knowledge of similar business situations and anticipate your likely future needs.

This means you can be confident that you have room for manoeuvre as your business evolves and grows, that you are getting a solution that represents the best value for money, and ultimately keeping systems and communications working without interruption.

A long-exposure photograph of a night sky showing star trails in a circular pattern, set against a dark blue background. The foreground shows a rocky, desert-like landscape with sparse vegetation.

# What can we do for you?

Serviceteam IT draws upon over 20 years of experience to design and deliver bespoke connectivity, network, and telecoms solutions for your organisation.

Serviceteam IT design and deliver sophisticated connectivity, network, and telecoms solutions. We get to know our clients inside out so we can design custom solutions with a single point of contact for delivery and management.

The objective is to simplify your business environment into an intuitive user friendly one where owners and senior managers have an understanding of their IT eco-system and are comfortable that it is supporting the business.

It is our ambition to remove the mystery that surrounds IT and Communications so you have a clear understanding of what you are purchasing, why you are purchasing it and what benefits it will bring you.

This allows us to make the right recommendations to our customers to ensure that their IT and Communications is supporting their business strategy. Our services and solutions methodology exists to enable your IT and com-

munications consumption to find the best fit for your organisational needs, supporting your objectives, delivering value, and focusing on results.

If you would like additional information or would like to speak to someone about how you can benefit from Fibre Ethernet, there are a number of ways to contact us:

## SPEED

A bandwidth capacity to suit you, from 10 Mbps to more than 10Gbps

## RELIABILITY

Up to 99.999% uptime as guaranteed by Service Level Agreement

## EXTENSIBILITY

Our infrastructure can easily grow, adapt, and scale with your business

## CONTINUITY

Network designed with contingency options to ensure business continuity

## SUPPORT

24/7 support from our dedicated fault management team

## RESILIENCE

A resilient connect to minimise downtime, delay, packet loss, & jitter

## MAINTANIENCE

Hardware maintainence included within standard service

## COST SAVINGS

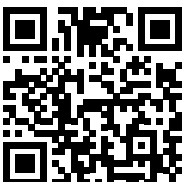

Do away with expensive hardware, switching, and set-up costs

## COMPLIANCE

Full IPv4 and IPv6 compliance means you can continue to communicate.
